

How we protect software at the core of the U.S. largest insurers

Problem

Customers from insurance industry are acutely aware of cyber-security, and hold software products they procure to highest standards of security.

This has put a lot of pressure on our client, an insurance software provider, in passing their customers' penetration tests with no embarrassing findings, and answering tricky security questionnaires.

Despite numerous penetration tests of their own, security issues were still slipping by, so a new approach was necessary.

Solution

SoftSeq performed OWASP ASVS software security audit, and follow-up improvement consulting for the client's product - an enterprise software solution used by top U.S. insurance companies, hardening its security posture.

SoftSeq then introduced Secure Software Development Life-cycle, with automation and security experts at each development stage. This approach has ensured that no architecture or code change slips by without technical security and risk assessment.

Result

SoftSeq engagement rendered 3rd party security assessments and penetration tests against our client's software product fruitless.

Additionally, SoftSeq's novel approach to security in software development has allowed SoftSeq's client to provide answers to their customer's security questionnaires during pre-sales that far exceed expectations.

For SoftSeq's client, this effort turned security from liability into a strong competitive advantage.
